## Biomedical Engineering Wallace H. Coulter Foundation Seminar Series

## "Nanoplatforms for Personalized Medicine"

Dr. Srinivas Sridhar Northeastern University

Monday, September 24, 2012 LECTURE: 9:00 AM—10:00 AM

> ENGINEERING CENTER ROOM EC 2300 10555 WEST FLAGLER STREET MIAMI, FL 33174

Abstract: Biocompatible nanomaterials are key components of novel approaches to addressing the major problems of disease diagnosis and therapy for personalized medicine. We have developed several nanoplatforms that offer potential for significant improvements in multi-modal imaging and targeted delivery of therapeutics. Theranostic nanoplatforms combine multiple functionalities including multi-modal imaging using MRI, SPECT and FMT, magnetic targeting to the disease site, delivery of the drug payload through sustained as well as triggered drug release.

We have developed a new approach to chemoradiation therapy (CRT), termed Biological In-Situ Image Guided Radiation Therapy, that involves the coating of spacers routinely used during radiation therapy with nanoparticles that release radiosensitizing drugs (e.g. docetaxel DTX for Prostate Cancer), that is synchronized with the radiation therapy schedule, with almost no systemic toxicity. This new nanoparticle approach is an exciting new combinatorial therapy for cancer as well as other diseases where image-guided radiation therapy is currently a preferred choice of treatment.

A new doctoral program has also been established incorporating new courses and interdisciplinary research in Nanomedicine. Supported by the National Science Foundation, National Cancer Institute, DoD Prostate Cancer Research Program, and Mazzone Foundation.

**Biography:** Srinivas Sridhar is Arts and Sciences Distinguished Professor of Physics at Northeastern University, and Lecturer on Radiation Oncology, Harvard Medical School. He is the Director and Principal Investigator of Nanomedicine Science and Technology, an IGERT (Integrative Graduate Education and Research Training) program funded by the the National Science Foundation. He is the founding director of the Electronic Materials Research Institute, an interdisciplinary center with research and education thrusts in nanophotonics and nanomedicine. From 2004 to 2008 he served as Vice Provost for Research at Northeastern University, overseeing a major expansion of the University's research portfolio. An elected Fellow of the American Physical Society, Sridhar's current areas of research are nanomedicine and nanophotonics. His paper in Nature in 2003 was listed among Breakthroughs of 2003 by the journal Science. He has published more than 170 articles on his work in nanomedicine, nanophotonics, metamaterials, quantum chaos, superconductivity and collective excitations in materials.
