#### NEW COURSE DEVELOPMENT AND MAJOR COURSE CHANGES

Prior to teaching the course in Spring 2018, BME 4230 – Biomechanics of Cardiovascular Systems had not been offered in several years. I redesigned the course within the catalog description to include content that connects solid tissue biomechanics to physiology and disease. I also introduced new modules focused on using biomechanics principles to address current problems in cardiovascular medicine. In Spring 2020, I introduced a graduate level section of this course (BME 5233), which includes in-depth discussions on nonlinear soft tissue behavior and analysis of published research in cardiovascular biomechanics.
